Architecture Decision Records

Records of architecturally significant decisions, in [MADR 4.0](#) format.

A decision is recorded here when it is expensive to reverse, likely to be challenged, or when its rationale must survive later pressure to undo it. Decisions not meeting that bar are recorded in [NOVA-DL-001](#), which is the complete index.

ADR	Decision	Status	Date
0001	PostgreSQL with pgvector as the sole datastore	Accepted	2026-09-07
0002	Job table and polling worker rather than a message broker	Accepted	2026-09-07
0003	No agent framework	Accepted	2026-09-07
0004	Mandatory human confirmation for memory writes	Accepted	2026-09-07
0005	embeddinggemma at 768 dimensions	Accepted	2026-09-08

Conventions

- Numbered sequentially from 0001. Numbers are never reused
- Filename is the number followed by a kebab-case title
- Status is one of proposed, rejected, accepted, deprecated, superseded by ADR-NNNN
- A superseded record is never deleted. Its status is amended and the superseding record links back
- Written at the point of decision, not retrospectively. Retrospective records read as reconstruction and an experienced reviewer will recognize them
